DTN Fuel Admin
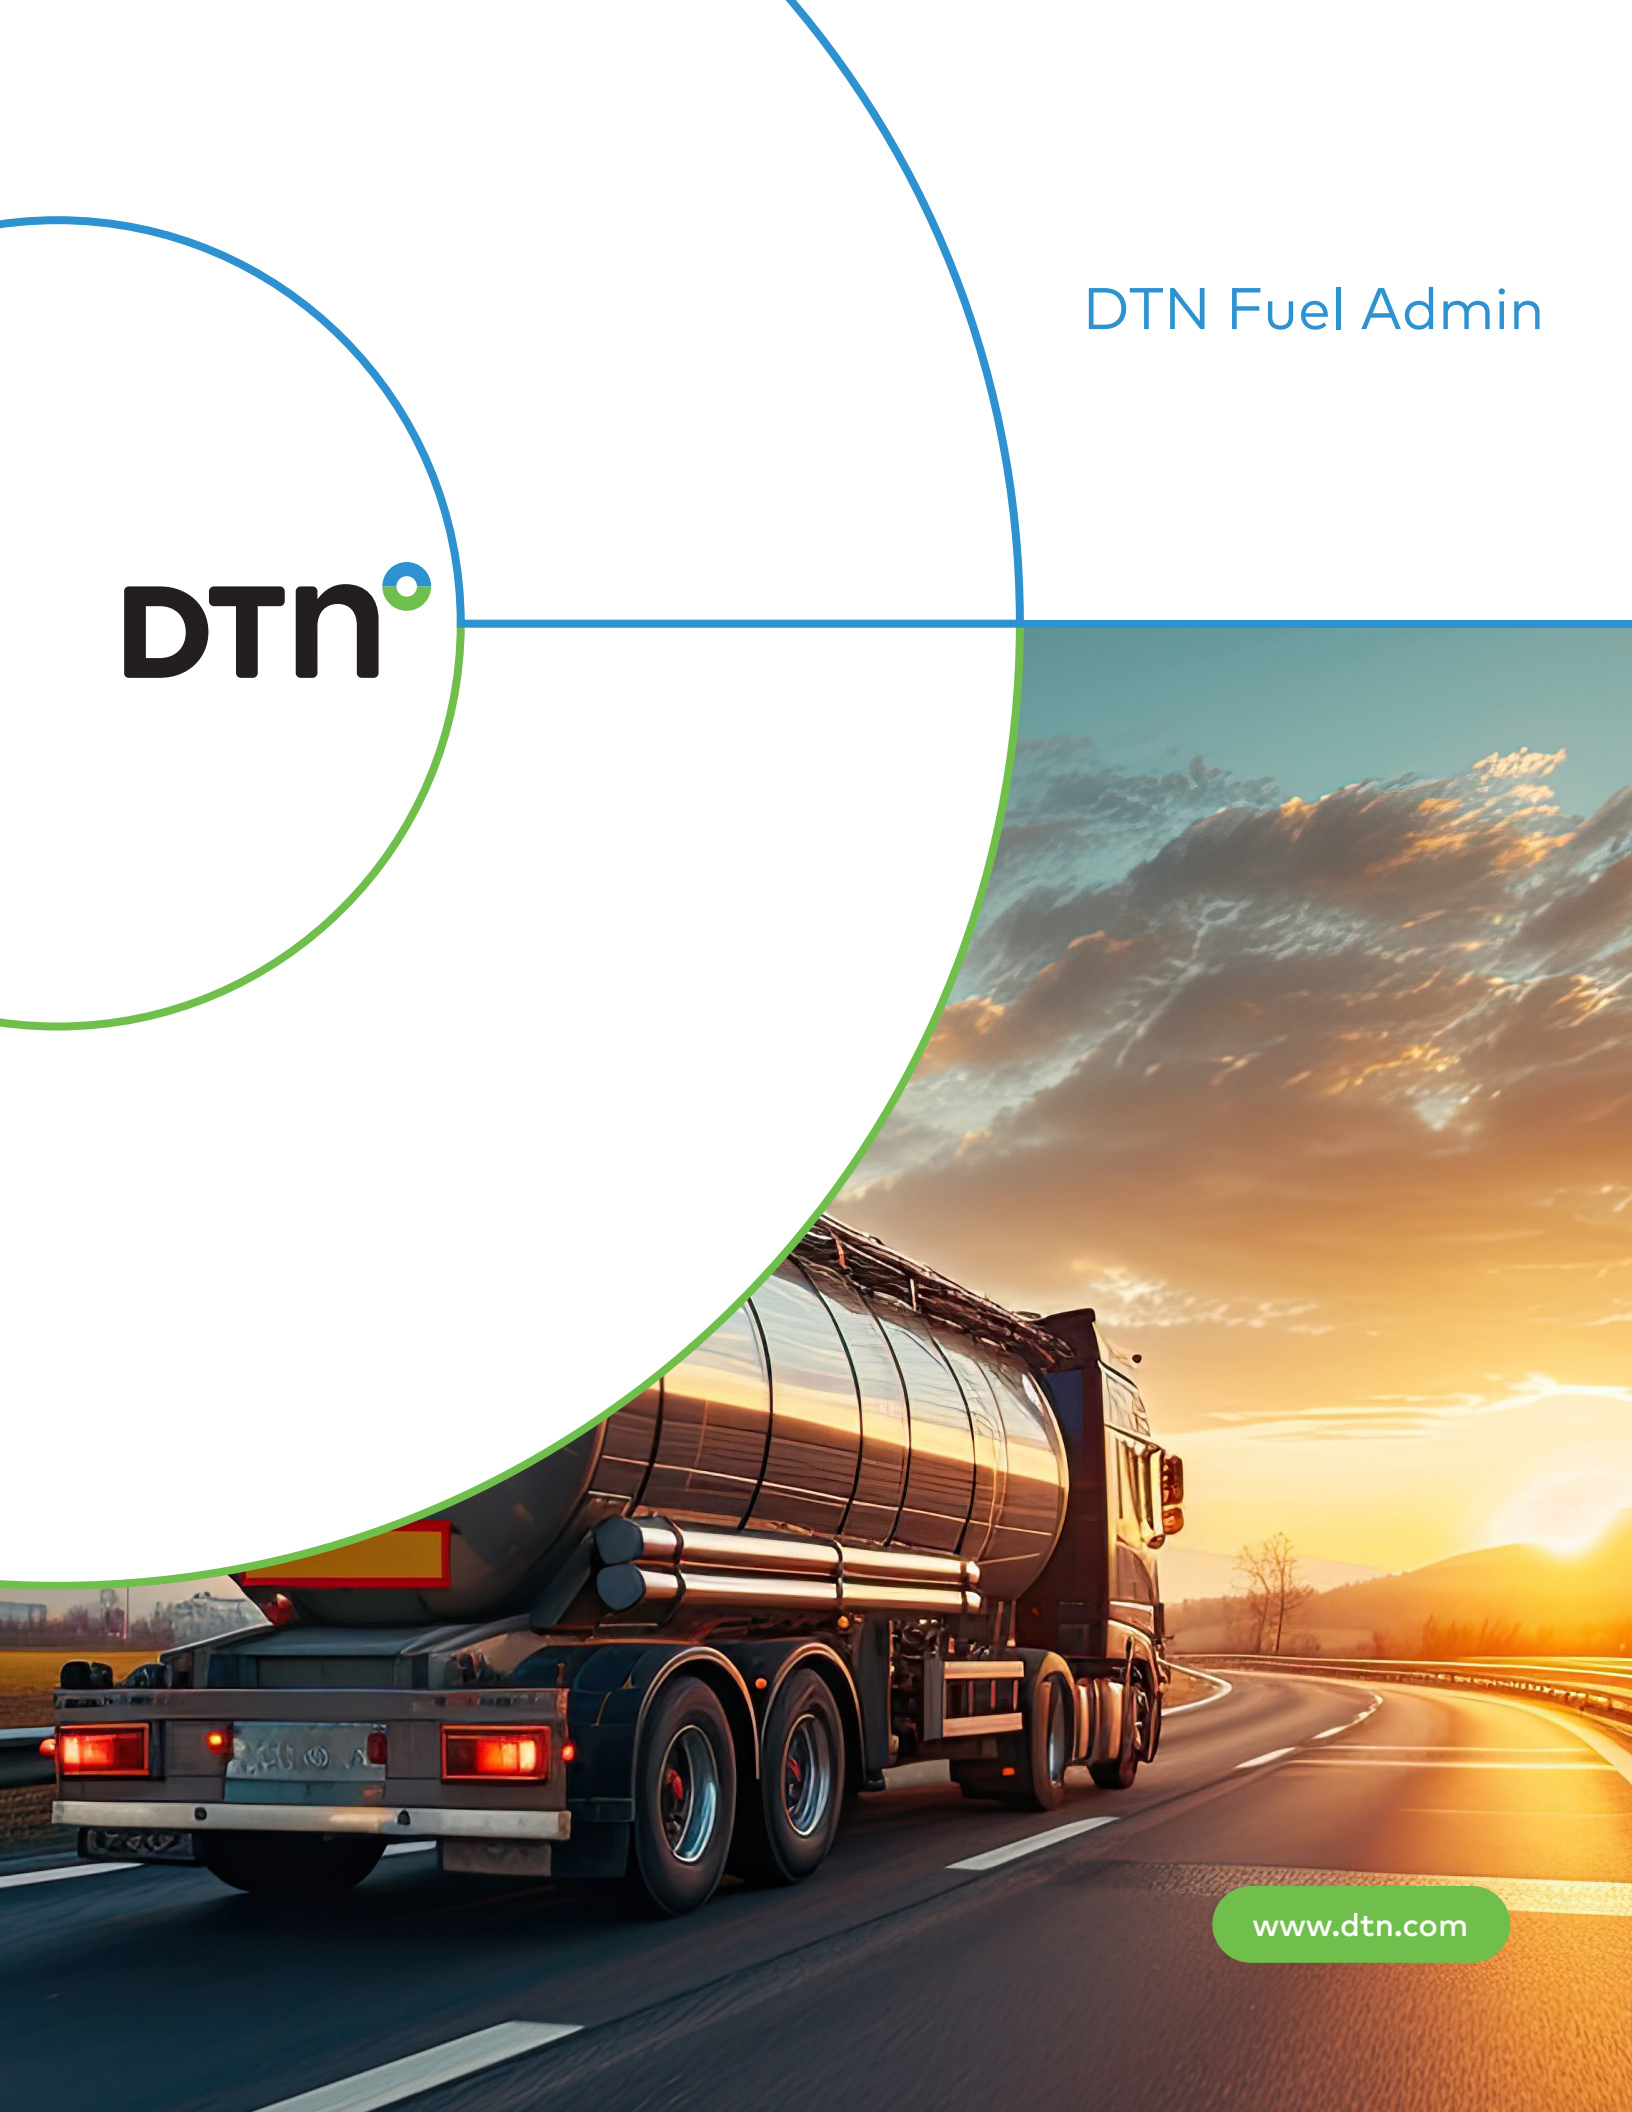

DTN Fuel Admin automates eBOL data

In recent years, the availability of the eBOL data has more than tripled, and it is often accessible within minutes of a load at the terminal. As such, more and more fuel marketers now request back office software that supports eBOL integration.

Benefits of eBOLs include the reduction, if not elimination, of manual errors; the automation and streamlining of administrative processes; the acceleration of invoicing and AR collections; and saving on related overhead costs. There is, however, one significant downside: they're often difficult to integrate into back office systems.

From the experts in actionable data products, DTN Fuel Admin™ was designed specifically to streamline eBOLs. Automating this singular process saves extraordinary time by automating the flow of eBOL data.

- DTN Fuel Admin gathers, aggregates, formats, and cross references eBOLs, accessible within minutes.

- The need for multiple formats can be eliminated while saving hours of daily manual cross-referencing.

- Data can be exported into your back office and displayed as a "human readable" BOL document without any kind of further translation or de-duplication.

- Any eBOL missing necessary data can either be withheld or appended through manual change or by custom business rule.

"DTN Fuel Admin not only improves customer credit management, but also enhances our ability to provide great customer service.

We only regret not having this product sooner."

- Indigo Energy Partners

Added features for increased efficiency and savings

Several other features make DTN Fuel Admin the leading solution for fuel buyers.

- Customize data fields to fit your content needs – regardless of your back office system.

- Its unique dashboard has a simple, robust interface that simplifies supplier mapping codes, even as seasonal products change, and new suppliers come on-board (by creating consistent eBOL coding from a variety of different sources and formats).

- Invoicing is simpler and faster because eBOLs are integrated into the back office, while tracking transactions across states, making tax reporting easier

- Supplier invoices can be automated. Invoices and BOLs can be sent to the back office. If the invoice quantity matches that of the BOL, it can be paid automatically.

- DTN Fuel Admin instantly alerts invoice discrepancies and helps identify missing BOLs faster.

- Cross-reference mapping can be centralized allowing you to take advantage of discounts or improved payment terms, pay invoices faster, and retrieve supplier invoices for future use.

- Documents are searchable, filterable, and instantly accessible (for staff, customers, outside auditors, etc.)

- Scale by total transactions, order management, and invoicing processes.

Customers who use DTN Fuel Admin often save thousands in up-front costs while substantially reducing ongoing maintenance of mapping data, and benefiting from accelerated billing processes, enhanced efficiency, and incremental profits.
